USB Type-C adapter, type A to C M/F, 3A, 5GB, 3.0 Version, bl

The DIGITUS® USB Type A to USB-C adapter allows you to use your current USB Type-C devices on an older USB A port. The adapter supports the USB 3.0 specification with data transfers of up to 5Gbps and provides a maximum power of 15 W (3 A). By simply reversing the USB-C connector, you can switch between USB 3.0 and USB 2.0 speeds, provided they are supported by the USB A port. The integrated 56k pull-up resistor protects your devices from damage due to overloading and only supplies as much power as the connected USB-C device requires. Backwards compatible with the USB 2.0 / 1.1 standards, this adapter allows you to use the full bandwidth of previous USB versions.

Safety notes

- When plugging and unplugging the cable, only grasp the plug and do not pull directly on the cable.
- Cables must not be kinked sharply or bent at tight angles, as this can damage the inner wires and lead to failures.
- Make sure that the cables are not under tensile load, as this can damage the insulation and the wires inside the cable.
- Ensure that cables are not laid in areas where they can be easily damaged mechanically.
- Cables should not be used in environments with extremely high or very low temperatures. Observe the product information on the maximum operating temperature of the cable
- Check cables regularly for visible damage such as cracks, kinks or signs of wear. Defective cables should be replaced immediately to avoid failures, short circuits or even electric shocks.
